

Week 3 - #2

Linear Algebra (II)

Today: Ch 3

Next Class: Ch 3

Ji-hoon Kim (Seoul National University)

Rudimentary Mathematical Methods of Physics (Fall 2026): Quiz #4

— [open book and open note, **but** no cellphone or laptop, drop it off as you leave the class] —

Please write down your name and student ID in the top right corner. (0.0 pt: no paper found with your name / 0.5 pt: paper found with your name and some answers / 1.0 pt: good answers)

1. Boas, Chapter 3, Section 2, Problem 12; then, Section 2, Example 2 (p.86)
2. In a 2-dimensional space, you need one angle to represent/define a rotation. In 3-dimensional space, how many angles do you need to represent/define a “rotation”?
3. For what c value(s) does the set of equations below have roots other than the trivial $(x, y) = (0, 0)$?

$$(1 - c)x + 3y = 0, \quad 4x + (2 - c)y = 0$$
