

Stellar emission:

MAPPINGS + Starburst99

Kinematically-shifted spectra

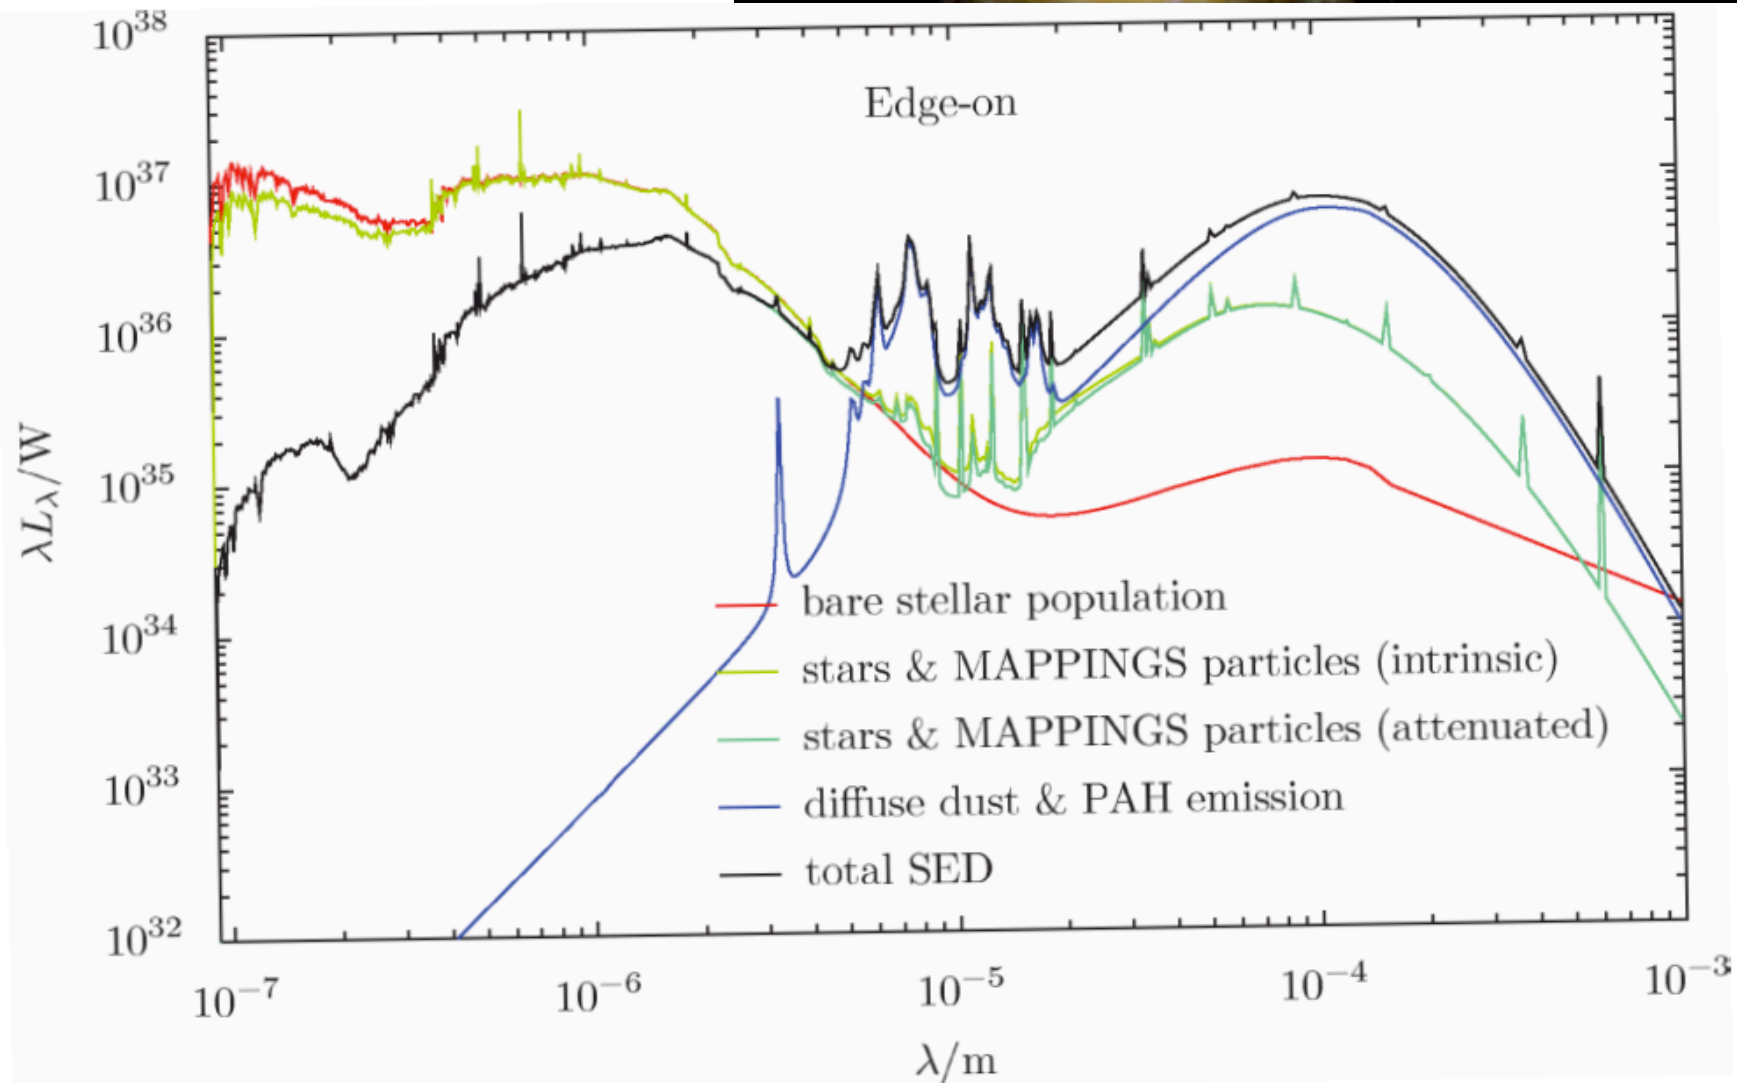

HII emission lines

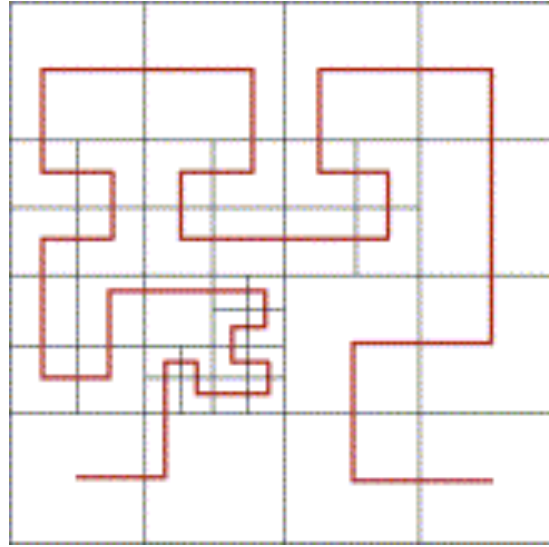

Mock Observations

Dust +

AGN emission

~250 G
per h

Exporting a file to Sunrise format means
rewriting every AMR cell in Hilbert depth-first order

Write out parameters, particles in appropriate units, etc.

```
from yt.mods import *
```

```
pf = load(file_amr)  
amods.sunrise_export.export_to_sunrise(pf, out_fits_file)
```

	yt 2.x -> Sunrise	yt 3.0 -> Sunrise	natively supported in Sunrise
RAMSES, ARTI, ARTII	Yes	No	No
Enzo	Yes	Yes	No
Gadget, TIPSY, Arepo	No	No	Yes
