The Second Life of the AGORA Disk Simulation

posted Jul 22, 2020, 12:36 AM by Ji-hoon Kim [updated Jul 22, 2020, 7:57 AM]

Dear All,

I've been asked to share with you an unexpected by product of our AGORA disk simulation.

Maybe some of you have recognized its short apparition in the video presenting the SDSS/eBOSS data release published yesterday:

<https://youtu.be/KJJXbcf8kxA>

Note that a 3D-360-VR (google cardboard) version of this film exists:

<https://youtu.be/GTHvXiAFgVk>

Finally, here are two face on view of the evolving AGORA disk alone:

<https://www.youtube.com/watch?v=Bpfhe6lx75o>

<https://www.youtube.com/watch?v=PIWv3dlbKNQ>

(downloadable files also available at:

<https://drive.google.com/drive/folders/1ywxnKPV4GNYvK0VCmzDu9XcwCaB5ga5z?usp=sharing>).

Best,

yves revaz

AGORA Isolated Disk Comparison Test – Paper Published

posted Apr 25, 2017, 5:28 AM by Ji-hoon Kim [updated Apr 25, 2017, 5:32 AM]

Dear AGORA Colleagues,

The 2nd paper of the AGORA Collaboration – Isolated Disk Comparison Test is accepted for publication in the ApJ in October 2016, and published in December 2016.

- Paper – arXiv link:
<http://arxiv.org/abs/1610.03066/>
(published version on Dec. 20, 2016)
- Paper – ApJ link:
<http://iopscience.iop.org/article/10.3847/1538-4357/833/2/202>
- Paper – Local/high-resolution version:
http://www.slac.stanford.edu/~mornkr/agora/AGORA_Paper4_draft.pdf

Sincerely,
Ji-hoon on behalf of the AGORA Disk Comparison Group and the AGORA Steering Committee

AGORA Flagship Paper Accepted / Press Releases

posted Feb 11, 2014, 1:51 PM by Ji-hoon Kim [updated Mar 6, 2014, 2:29 AM]

The Flagship paper was accepted by the ApJS in November 2013, and **published** in January 2014 ([local version](#)). The published version of the manuscript is also available on the [arXiv](#). The press releases by UC–HiPACC and UCSC are in the following locations. Joel Primack and Piero Madau thank Trudy Bell (UC–HiPACC) and Tim Stephens (UCSC) for their effort. -- [UCSC Press Release \(EurekAlert\)](#), [UC–HiPACC Press Release \(EurekAlert\)](#), [UC–HiPACC AstroShort](#)

One-slide Introduction of AGORA

posted Aug 30, 2013, 7:30 AM by Ji-hoon Kim [updated Sep 7, 2013, 10:07 AM]

Thanks greatly to the help of Fabio Governato and Piero Madau, we have created a one-slide introduction of the AGORA Project. Please feel free to use this slide in your talk if you like to introduce the Project to your audience. Please also feel free to send any comment or feedback to [santacruzgalaxy\(at\)gmail\(dot\)com](mailto:santacruzgalaxy(at)gmail(dot)com).

[Alpha Release of the AGORA Flagship Paper](#)

posted Aug 2, 2013, 3:53 PM by Ji-hoon Kim

Dear Colleagues,

First of all, thank you as always for your contributions in the AGORA Project. As you all are aware, many of us have been writing the Flagship paper of the AGORA Project to introduce the project rationale, common ICs, common physics package, and common analysis toolkit. For this paper, we also have studied the the proof-of-concept DM-only cosmological simulations with 9 different variations of the participating codes. (While some preliminary results was shared on the Project Workspace, we have refrained from posting any figure or plot even on the Project Workspace since the major analysis effort started in the common analysis yt platform. This was primarily because we wanted to ensure that all code groups have a chance to independently verify the analysis results with their own tools before the internal circulation. This careful step was indeed useful and successful to get ourselves onboard with the composite figures/plots, and to build trust for yt and for each other, especially at this still early stage of an ambitious project like AGORA.)

--

We are in the alpha release process of the AGORA Flagship paper *within* the Collaboration.

<https://sites.google.com/site/projectagoraworkspace/collaborative-documents/progress-report-3>

We thank the proof-of-concept test participants who have executed and analyzed the simulations, and provided feedback on the early version of the paper. We also thank the AGORA steering committee for carefully reviewing the manuscript. The current draft is up-to-date with their revisions. The collaboration members who have contributed to this process include: Abel, Gnedin, Hahn, Hobbs, Kim, Kuhlen, Leitner, Madau, Mayer, Nagamine, Pillepich, Primack, Read, Rudd, Shen, Teyssier, Thompson, Todoroki, Turk, and Wadsley.

We now want to ask all collaboration members to review the draft.

- Please have a look at the paper and send me any comment or feedback by Aug.10 (PDT). Sections 3, 5 and 6 may have changed the most since the last version you read in April. We note that a major change to the paper is less likely at this stage, and we will want to keep the length of each Section as is.
- Please send your acknowledgements, and suggest co-authors if we missed any. I will try to keep the draft on the web as up-to-date as possible with your revisions.

--

After the review process is completed the paper will be submitted to ApJS with a final approval by the steering committee. I am sorry that the process will need to be put on a fast pace as we try to make up for many logistical delays over the past few months. Please let me know if you have any question. Thank you very much for your insights in advance.

Sincerely,
Ji-hoon Kim

Policies regarding the disclosure of the AGORA simulation results

posted Jul 12, 2013, 1:20 PM by Ji-hoon Kim

Dear AGORA Project Participants,

As we approach the major milestones such as the 2nd AGORA Workshop next month and the release of the Flagship paper soon, we first thank you for all your contributions to the AGORA High-resolution Galaxy Simulations Comparison Project.

The AGORA Steering Committee wants to remind you of the policy regarding the disclosure of the simulation results of the AGORA Collaboration. We emphasize that no preliminary result may leave the Collaboration until it is fully established as final and releasable to the public by the appropriate Working Group leader and by the members of the Steering Committee. Any results shared in the Collaboration -- explicitly or implicitly -- on the Project Workspace, by emails, or by any other means shall not be leaked beyond the confines of the Collaboration, nor be used to wittingly or unwittingly distribute incomplete or misleading information about the simulation results.

Maintaining the highest degree of integrity of the project is one of the keys to success, especially for a large and ambitious endeavor like the AGORA Project. We ask all of you to refrain from sharing any preliminary results outside the Collaboration or spreading rumors about them before publication.

Thank you very much for your attention.

Sincerely,
The AGORA Steering Committee
Abel, Gnedin, Madau, Mayer, Primack, Teyssier, and Wadsley
