

# AGORA Workshop Guiding Principles

We need to make *progress* at this meeting,  
especially on Papers 2, 3, 4

*Actions* must happen at the breakout sessions,  
not just talking — for example,

- For paper 2, start high-resolution DM-only runs in several codes; build common analysis scripts with yt, including Rockstar
- For papers 3 & 4, Nick Gnedin's dummy API is implemented in all codes, including Gasoline/Changa by Sijing Shen just now, so start adiabatic runs now

We must continue to develop *consensus*, such as  
on SF/FB recipes, Grackle implementation, etc.,  
to be ratified at Sunday's AGORA-wide meeting.  
If confirmed, they should not later be questioned  
by people who didn't participate.
